

Picomite - Compiling The Firmware

The source code for the Picomites is available [here](#). The compiled binaries and documentation are readily available [here](#). If you want to compile your own binary the key information required to compile the code is listed in the readme of the source. In general the developers cannot/don't give support in the setup of the development environment as there are many moving parts and remote support can be very time consuming and difficult.

This post by TBS by member @karlelch gives an example and more detailed instruction for the Windows 11 environment which may be helpful.

[TBS example How to by @karlelch on TBS](#)
