

EditTable Plugin

This installed plugin adds an additional edit button to every table. Using this button the table can be edited in an Excel-like visual interface. The plugin also adds a button to the standard toolbar for inserting new tables using this editor.

Compatibility

Not compatible with IE8.

Usage

All tables will have their own edit button. This will open the table using plugin.

Row 2 Col 1
Row 3 Col 1
Edit

When editing a text in the normal editor, a new table can be inserted using the  button.

Editing

Select a cell by tab key, cursor keys or mouse click. To **overwrite** cell contents just start to type, to **change** cell contents press enter or double click a cell. To confirm an edit press enter or move to another cell.

Inside a cell, all wiki syntax allowed for tables can be used as usual.

Heading 3	Header 4
just type, the input area expands automatically	
)	sfsa

Manipulating Cells

H Toggle header state
 Left-align cell
 Center cell
 Right-align cell
 Add row above
 Remove row
 Add row below
 Add column on the left
 Remove column
 Add column on the right
 Merge cells

All cell manipulation is done via a right-click context menu. To do so select a single cell or select multiple cells by dragging. The context menu allows you to change the alignment and header state of cells, adding and removing columns and rows and gives a way to make cells span over multiple rows or columns.

Dragging the small square at the bottom right of a selected cell will fill the same content to the cells selected by dragging. Please note that auto-continuing rows (eg. counting onward) like in Excel is not supported currently.

Move

Rows and Columns can be rearranged by moving them. Contents will be moved accordingly. Please note that rows or columns can not be moved out or into column or row spans respectively.

	1	Headin
	2	Row 1 C
	3	Row 2 C

		 D
g 3		Header 4
Col 3		sfsd

To move a row, grab the handle at the top of its header cell, then move it to where you want it to go. For moving columns grab the handle at the left of its header cell.

Resize

grab to resize

	D
	Header 4
ls	sfsd

For editing purposes columns can be manually resized by dragging the handle on the right of their header cell. Note that this is not saved by DokuWiki (since DokuWiki has no width or other properties for tables) but might be a good help when editing big tables with many columns that might fit on a screen page with less scrolling by resizing column width.
